

Lab Sheet pointer(lab sheet 7)

1. WAP using pointer to compute sum and average of elements of array.
2. (a) WAP that takes two numbers from user and evaluates the sum, difference and product using pointer.
(b) WAP that takes two numbers from user and evaluates the sum, difference and product using pointer and function.
3. WAP using DMA and pointer to read n numbers from user and display sum.
4. (a) WAP to find largest and smallest number from list of numbers using DMA.
(b) WAP to find second and third largest number using pointer.
5. (a) WAP to sort n numbers in ascending order using pointer.
(b) WAP to sort n numbers in ascending order using pointer and function.
6. WAP to sort n numbers in ascending order using DMA and function.
7. WAP to merge two sorted arrays into third array using pointer.
8. WAP to read 2D-array (size 3×3) using pointer and display it.
9. Display the length of the string using pointer and function.
10. WAP to check the whether the enter string is palindrome or not using pointer and function.

Lab Sheet 8 (Structure)

1. WAP to read a record of 5 students and print the records of student according to the roll number (in ascending order). The record should include: Name, Age, Roll no.
2. Repeat the Question no.1 and print the record according to name in alphabetical order.
3. WAP to make nested structure. Put a structure (date of birth) within structure record.
4. WAP to pass a structure to a function.
5. WAP to read record of 5 employees of an office and print the record of person who have 2nd highest salary.
6. WAP to make a record of 5 students and print (name, roll, age).
7. WAP to make record of 5 students (name, folio marks of 3 subjects & print total).
8. WAP to make nested structure. Put structure DOB within 1st structure.
9. WAP to read record of 5 employees & print the record of person who have highest & lowest salary. (Include: name, salary, address).
10. WAP to make a record of a student using pointer to structure. (Name, ID, age, name).
11. WAP to make a record of 5 students using structure array and pointer.
12. WAP to use pointer as a member of structure.
13. WAP to pass structure to function (no pointer).
14. WAP to pass structure to function using pointer.
